SUMMARY

Software developer with ~3 years of experience building backends that don't fall over in companies working with AI. Currently at CARS24 on the C2C module, writing Java + Spring Boot with Kafka and RabbitMQ. Graduated from IIT Jodhpur.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL
Backend & Frameworks: Spring Boot, Express.js, REST APIs, GraphQL, Microservices, System Design
Databases & Caching: PostgreSQL, MongoDB, Redis, Sequelize
Messaging & Infrastructure: Kafka, RabbitMQ, Docker, AWS, Firebase, Jenkins, GitLab CI/CD
Testing & Automation: JUnit, Mockito, Groovy, API Automation

PROFESSIONAL EXPERIENCE

CARS24 — SDE-1 Apr 2025 – Present

- **Designed and scaled** payment orchestration microservices using Java, Spring Boot, and PostgreSQL with smart routing across Razorpay, Juspay, Cashfree, and Paytm based on success rate, cost, and failover; handling 1k peak TPS at 99.9%+ reliability.
- **Optimized** sales panel APIs to drop p99 latency from 1-2s to ~100ms, and added bulk upload/download across multiple file formats to streamline the sales agent workflow.
- **Owned C2C workflows** (seller/buyer monetization, chat payments, lead generation, seller journey revamp) using Spring Boot, Redis, and RabbitMQ; supporting thousands of users per minute and 1000+ daily payments.
- **Trained and integrated** a chatbot on C2C-specific data by exposing transactional APIs, enabling payments, refunds, and order operations directly through chat.
- **Centralized** the config module and config logging across services, and raised unit + integration test coverage from 0 to 50% on critical services.
- **Integrated** Clevertap (RabbitMQ-driven user notifications), Spyne (car image webhooks with concurrency handling), and Acefone (call logs); parallelized C2C BFF-layer APIs in Node.js by user role.
- **Developed Verify-360,** a Spring Boot + PostgreSQL platform where users upload vehicle documents to a Document service backed by Amazon S3 (post-compression), and legal officials review/approve/reject based on permissions.

Sprinklr — Automation Engineer Feb 2024 – Mar 2025

- **Streamlined** unit and integration test automation for the Workforce Management module using Java, Selenium, GraphQL, and REST APIs; cut sanity time from 12 hours (1500 test cases) to 2 hours through optimized Jenkins job runs.
- **Built** a Spring Boot admin panel for company-wide test case management — supporting alerts, recurring runs, and test reports — handling 100s of users and 1000s of test runs.
- **Co-developed** a JSON-driven API automation framework using strategy and factory builder patterns — a single JSON file now executes a full test suite across 7 flows (if/for/switch/payload/headers/query params), eliminating DTO boilerplate.
- **Introduced** test modules for AI-generated outputs in forecasting and scheduling, validating ~100 constraint combinations per input form across 10+ dropdowns.

Cogoport — Software Development Engineer Aug 2023 – Dec 2023

- **Developed** HRMS modules (Payroll, Onboarding, Leave Management, etc.) with a team of 3, replacing the existing HRMS portal and saving ~$50K/year in licensing.
- **Implemented** Expense and Access Management (automating tool access), used by 900+ employees.
- **Improved** analytics modules by integrating data from multiple databases and building a SQL query generator for visualization, dropping report generation from 1-2 hours to a few minutes.

Aspiro — SDE Intern Feb 2022 – Jul 2022

- **Integrated** Microsoft Clarity, Google Analytics, and Firebase to track user behavior (3x interactivity uplift); automated GitLab → AWS EC2 deploys via Docker scripts, cutting deploy time by ~70% (to ~5 mins).

EDUCATION

Indian Institute of Technology, Jodhpur Jul 2019 – May 2023

B.Tech, Mechanical Engineering *CGPA: 8.33/10*

ACHIEVEMENTS

- Secured 5th position in a company-wide Techathon conducted by CARS24 (2025).
- Led 35-member team for accommodation and transport ops at Varchas '23, IIT Jodhpur (900+ participants).
